HELIX CPG PARTNERS | MARKET GAP ANALYSIS

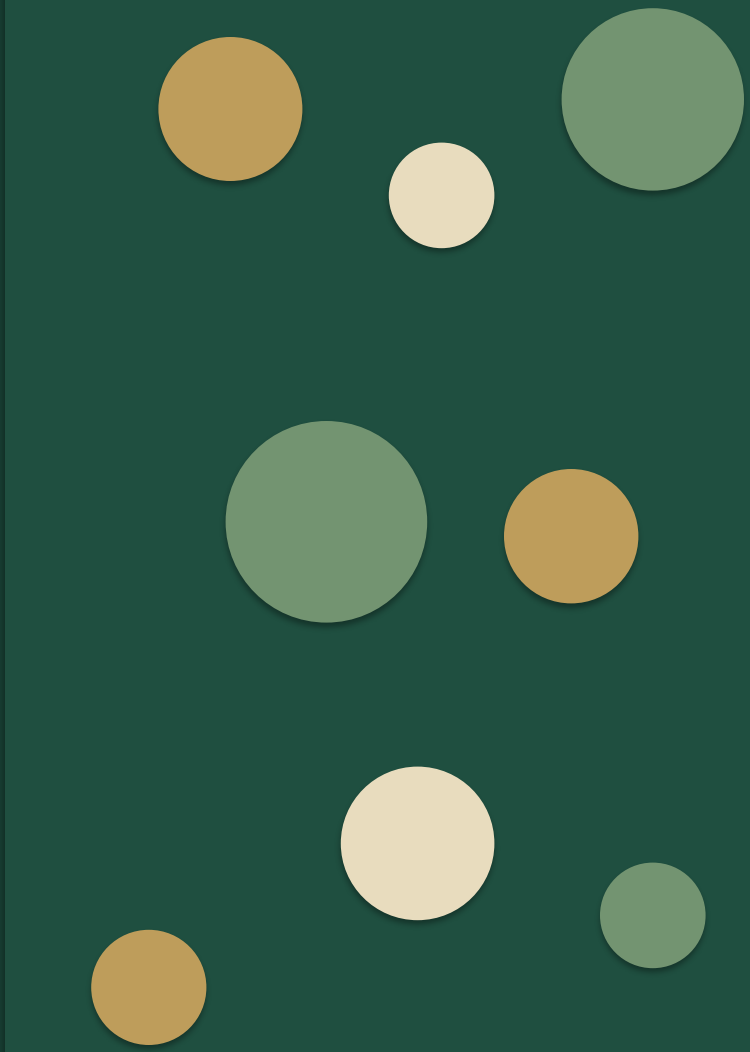

THE SUGAR TRAP

Finding a healthy-snacking opportunity

A data-driven exploration of high-protein, low-sugar products

Open Food Facts sample analysis

Prepared by: Jeniffer Chelangat | November 2026

The question and method

BUSINESS QUESTION

Where could a healthy-snacking product line fit nutritionally?

DATA AND PREPARATION

- Started with a 500,000-row sample from Open Food Facts.
- Trimmed product names; treated blank names as missing and removed those rows.
- Treated sugar or protein values outside **0–100g per 100g** as invalid.
- Excluded products missing either nutrient from the nutrition analysis; values were not imputed.
- Retained **445,136 products** with usable names and sugar/protein values.
- Assigned products without a usable category to **“Unclassified”** rather than dropping them.

445,136

Products retained for analysis

After cleaning and nutrients data checks

NUTRITIONAL OPPORTUNITY CRITERIA

Protein > 12g

Sugar < 4.31g

Both measured per 100g of product

What the nutrient matrix shows

HOW TO READ THE PLOT

- Each dot represents one product.
- Horizontal axis: sugar (g per 100g).
- Vertical axis: protein (g per 100g).
- Dashed lines mark the two thresholds.
- The upper-left region contains products meeting both criteria.

Category comparison and recommendation

83,328

Qualifying products overall

Across the analysed categories

6,190

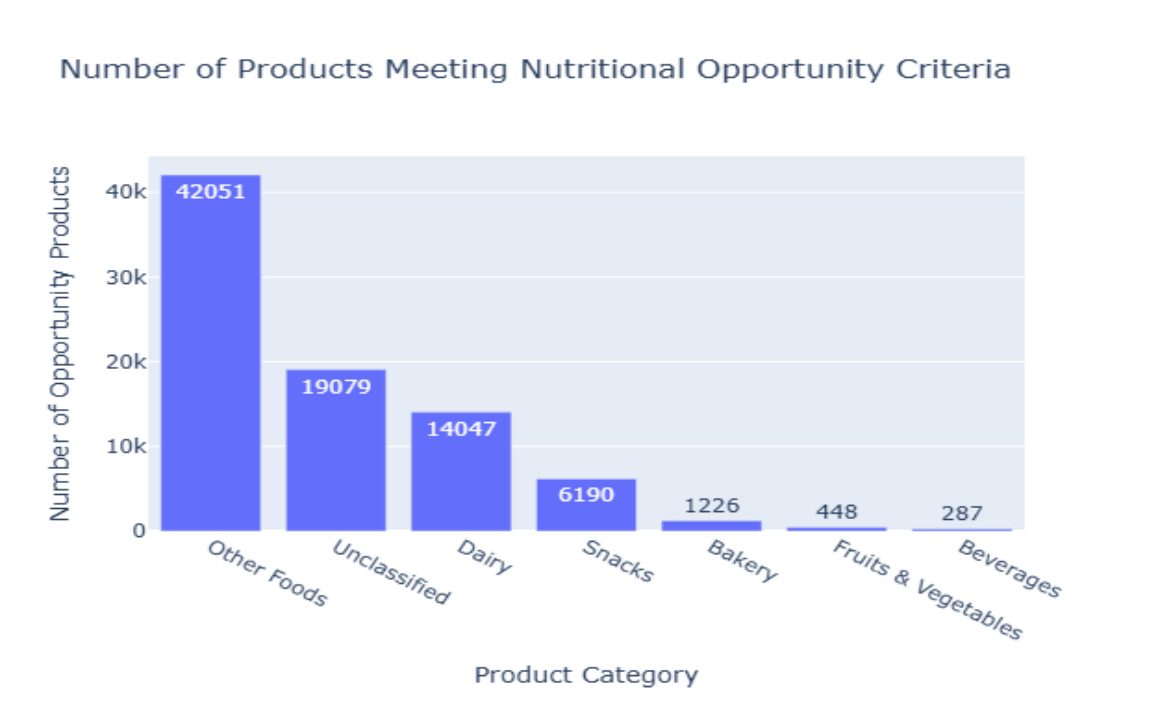

Qualifying snack products

Out of 55,836 snack products

11.09%

Snack opportunity rate

Share meeting both thresholds

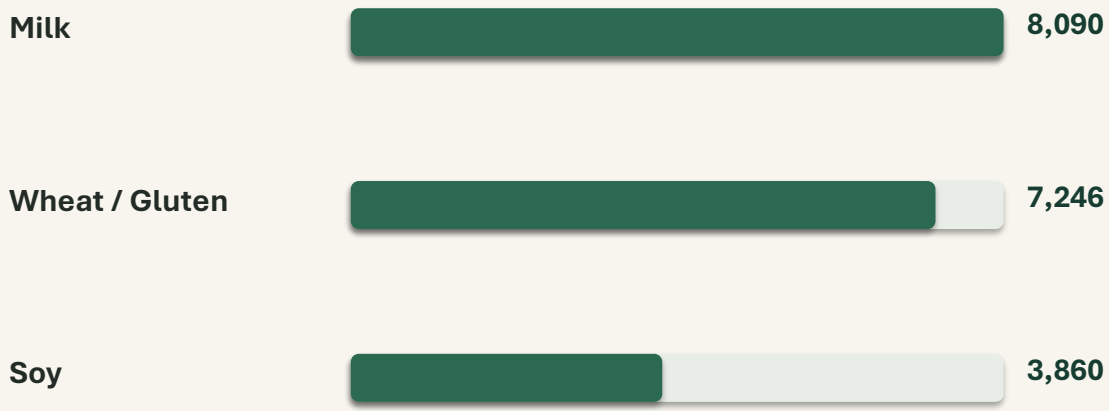

THE RECOMMENDATION

Explore snack concepts with more than 12g of protein and less than 4.31g of sugar per 100g

Dairy has the highest qualifying share (34.69%), but Snacks is the recommended focus because it aligns directly with the client's healthy-snacking objective.

Ingredients and next steps

MOST FREQUENT INGREDIENT KEYWORD MATCHES

Interpretation

These counts represent keyword matches in ingredient lists; they do not measure each ingredient's protein contribution.

WHAT TO DO NEXT

- Validate consumer interest and willingness to buy.
- Review market size, competitors and price points.
- Test product concepts through R&D and nutrition review.
- Use sales or retail data to assess commercial viability.

TAKEAWAY

The analysis identifies a nutritional opportunity; not proof of unmet consumer demand.
